Information for BFY II Proceedings Contributors

The BFY II conference will publish a peer-reviewed, on-line proceedings to serve as the written record of the scholarly work presented at the conference. The proceedings will cover topics related to the teaching and/or learning of physics laboratory classes beyond the first-year of college. Submission of case studies of particular laboratory classes, descriptions of novel experiments or activities for the advanced lab, preliminary research results on student learning in lab courses, and related topics are welcome. All papers go through a peer-review process prior to being accepted for inclusion in the proceedings.

The BFY II Proceedings will be published online at the advanced lab page on Compadre.
All BFY II Proceedings papers are limited to four (4) pages in length, double-column 8.5 x 11 inch format. The entire document should be in Times New Roman font. The papers should follow the PERC Conference Proceedings format. Authors may choose to use either the PERC 2014 or the PERC 2015 guidelines.

Proceedings editors will not copy-edit or typeset papers. Therefore, it is imperative for authors to double, if not triple, check their papers carefully before they are submitted to ensure that they are readable and understandable by the broader advanced lab community, and that the papers adhere to the appropriate formatting guidelines.
